PRELIMINARY INSTRUCTIONS AND WARRANTY INFORMATION

WARNING: This equipment is a "CLASS A" equipment. In a residential place this equipment can cause hash. In this case can be requested to user to take the necessary measures.

Please observe safety precautions when handling this unit.
This equipment contains dangerous currents and high voltages.

This manual is written as a general guide for those having previous knowledge and experience with this kind of equipment. It is not intended to contain a complete statement of all safety warnings which should be observed by personnel in using this or other electronic equipment.

R.V.R. doesn't assume responsibility for injury or damage resulting from improper procedures or practices by untrained/unqualified personnel in the handling of this unit.

Please observe all local codes and fire protection standards in the operations of this unit.

CAUTION: always disconnect power before opening covers or removing any part of this unit. Use appropriate grounding procedures to short out capacitors and high voltage points before servicing.

Any damage to the goods must be reported to the carrier in writing on the shipment receipt. Any discrepancy or damage discovered subsequent to delivery, shall be reported to R.V.R. within five (5) days from its receipt.

R.V.R. extends to the original end-user purchaser all original manufacturers warranties which are transferable and all claims are to be made directly to R.V.R. per indicated procedures.

All manufacturers warranties will be supported by R.V.R. to ensure precise and speedy service where possible.

R.V.R. shall not be liable for any damage of whatsoever nature, arising out of or in connection with the product or its use thereof.

R.V.R.'s warranty shall not include:

- 1) Re-shipment of the unit to R.V.R. for repair purposes
- 2) Any unauthorized repair/modification
- 3) Incidental/consequential damages as a result of any defect
- 4) Nominal non-incidental defects
- 5) Re-shipment costs or insurance of the unit or replacement units/parts

Warranty shall come into force from invoice date and for the period of the manufacturer's warranty.

The warranty for a period of 12 months is referred to any R.V.R. product, while for products as Transistors, Mos-Fet and Tubes of the final stages is applied the manufacturer's warranty off these devices.

To claim your rights under this warranty:

- a. Contact the dealer or distributor where you purchased the unit. Describe the problem and ask if he has an easy solution. Dealers and Distributors are supplied with all the information about problems that may occur and usually they can repair the unit quicker than what the manufacturer could do. Very often installing errors are discovered by dealers.
- b. If your dealer cannot help you, contact R.V.R. in Bologna and explain the problem. If it is decided to return the unit to the factory, R.V.R. will mail you a regular authorization with all the necessary instructions to send back the goods.
- c. When you receive the authorization, you can return the unit. Pack it carefully for the shipment, preferably using the original packing and seal the package perfectly. The customer always assumes the risks of loss (i.e., R.V.R. is never responsible for damage or loss), until the package reaches R.V.R. premises. For this reason, we suggest you to insure the goods for the whole value. Shipment must be effected C.I.F. (PREPAID) to the address specified by R.V.R.'s service manager on the authorization.

DO NOT RETURN UNITS WITHOUT OUR AUTHORIZATION AS THEY WILL BE REFUSED.

Be sure to enclose a written technical report where mention all the problems found and a copy of your original invoice establishing the starting date of the warranty.

Replacement and warranty parts may be ordered from the following address. Be sure to include the equipment model and serial number as well as part description and part number.

Fax +39-51-6011104**

- Broadcasting Equipment -

R.V.R. reserves the right to modify the design and specifications of the equipment in this manual without previous notice.

WARNING!

The currents and voltages in this equipment are dangerous!
Personnel must at all times observe safety regulation!

This manual is intended as a general guide for trained and qualified personnel who are aware of the dangers inherent in handling potentially hazardous electrical and electronic circuits.

It is not intended to contain a complete statement of all safety precautions which should be observed by personnel in using this or other electronic equipment.

The installation, operation, maintenance and service of this equipment involves risks both to personnel and equipment, and must be performed only by qualified personnel exercising due care.

R.V.R. ELETTRONICA S.r.l. shall not be responsible for injury or damage resulting from improper procedures or from the use of improperly trained or inexperienced personnel performing such tasks.

During installation and operation of this equipment, local building codes and fire protection standards must be observed.

WARNING!

Always disconnect power before opening covers, doors, enclosures, gates, panels or shields.
Always use grounding sticks and short out high voltage points before servicing. Never make internal adjustments, perform maintenance or service when alone or when fatigued.

Do not remove, short-circuit or tamper with interlock switches on access covers, doors, enclosures, gates, panels or shields.

Keep away from live circuits, know your equipment and don't take chances.

WARNING!

In case of emergency ensure that power has been disconnected

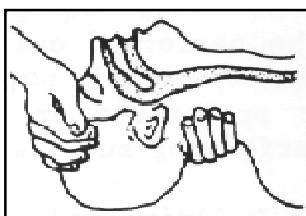

Treatment of electrical Shock

- 1) If victim is not responsive follow the A-B-C's of basic life support.

PLACE VICTIM FLAT ON HIS BACK ON A HARD SURFACE

A AIRWAY

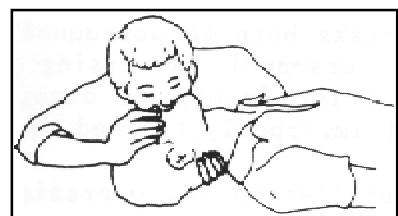

IF UNCONSCIOUS,
OPEN AIRWAY

LIFT UP NECK,
PUSH FOREHEAD BACK,
CLEAR OUT MOUTH IF NECESSARY,
OBSERVE FOR BREATHING.

B BREATHING

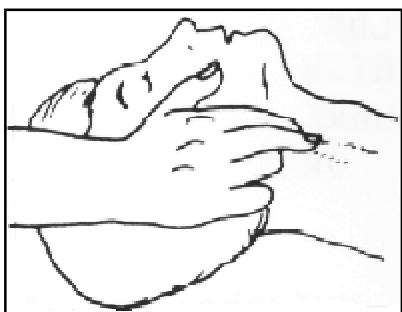

IF NOT BREATHING,
BEGIN ARTIFICIAL
BREATHING

TILT HEAD,
PINCH NOSTRILS,
MAKE AIRTIGHT SEAL,
4 QUICK FULL BREATHS.
REMEMBER MOUTH TO MOUTH
RESUSCITATION MUST BE
COMMENCED AS SOON AS
POSSIBLE.

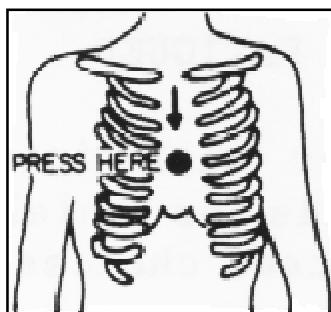

C CIRCULATION

CHECK CAROTID PULSE

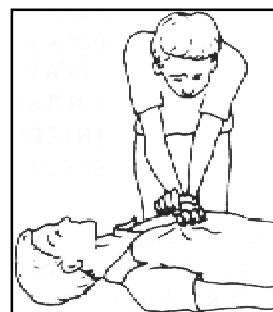

IF PULSE ABSENT,
BEGIN ARTIFICIAL
CIRCULATION

DEPRESS STERNUM 1 1/2" TO 2"

APPROX. 80 SEC. : ONE RESCUER, 15 COMPRESSIONS,
2 QUICK BREATHS.

APPROX. 60 SEC. : TWO RESCUERS, 5 COMPRESSIONS,
1 BREATH

NOTE: DO NOT INTERRUPT RHYTHM OF COMPRESSIONS
WHEN SECOND PERSON IS GIVING BREATH.

Call for medical assistance as soon as possible.

- 2) If victim is responsive.
 - a. Keep them warm.
 - b. Keep them as quiet as possible.
 - c. Loosen their clothing (a reclining position is recommended).

FIRST-AID

Personnel engaged in the installation, operation, maintenance or servicing of this equipment are urged to become familiar with first-aid theory and practices. The following information is not intended to be a complete first-aid procedure, it is brief and is only to be used as a reference. It is the duty of all personnel using the equipment to be prepared to give adequate Emergency First Aid and thereby prevent avoidable loss of life.

Treatment of electrical Burns

- 1) Extensive burned and broken skin.
 - a. Cover area with clean sheet or cloth.
(Cleanest available cloth article).
 - b. Do not break blisters, remove tissue, remove adhered particles of clothing, or apply any salve or ointment.
 - c. Treat victim for shock as required.
 - d. Arrange transportation to a hospital as quickly as possible
 - e. If arms or legs are affected keep them elevated.

NOTE

If medical help will not be available within an hour and the victim is conscious and not vomiting, give him a weak solution of salt and soda: 1 level teaspoonful of salt and 1/2 level teaspoonful of baking soda to each quart of water (neither hot or cold).

Allow victim to sip slowly about 4 ounces (half a glass) over a period of 15 minutes.

Discontinue fluid if vomiting occurs (Do not give alcohol).

- 2) Less severe burns - (1st & 2nd degree)

- a. Apply cool (not ice cold) compresses using the cleanest available cloth article.
- b. Do not break blisters, remove tissue, remove adhered particles of clothing, or apply salve or ointment.
- c. Apply clean dry dressing if necessary.
- d. Treat victim for shock as required.
- e. Arrange transportation to a hospital as quickly as possible.
- f. If arms or legs are affected keep them elevated.

CHAPTER1

GENERAL DESCRIPTION

1.1 INTRODUCTION

The R.V.R. model URP are very compact externally powered FM excitors which may be used as an economic alternative to a low power exciter or as a portable unit.

1.2 ELECTRICAL DESCRIPTION

The URP is capable of either 10 watts or 2 watts with the power output being controlled by a switch on the front panel.

The URP/2 model is capable of 2 watts only.

Both units operate from an external power supply which must be regulated to ensure stability of the operating frequency.

The supply voltage may be in the range of 12 VDC to 13.8 VDC.

Power output will vary somewhat with the applied supply voltage.

1.3 SPECIFICATIONS

Please refer to Table A for the electrical specifications and Table B for the mechanical specifications.

TABLA**ELECTRICAL SPECIFICATIONS**

DC Power Requirements (approx) at 10W (approx) at 2.5W	12 - 13.8V, 2.2A or 1.7A
Frequency Range	from 87.5 to 108MHz (other in request)
Frequency Range	direct from front panel in 100KHz increments-shift 50KHz
Frequency Stability	better than ±500Hz
Max Power Output	10W ±10% dependent on and portionate to supplied DC Volatge (12-13.8V allowed)
R.F. Output Connector	S0239 (PL) type
Output Impedance	50 Ohm
Audio Inputs	2 Total, 5KOhm impedance, unbalanced,balanced. 1 Standard stereo male XLR which can be used either for composite/wideband operation or monaural operation (switchable). 1 Standard mono male XLR for direct microphone use with built-in micro pre-amp and limiter.
Input Level for Stereo Version	2Vrms for 100% modulation
Input Level for Mono Version	25mV rms for 100% modulation

Stereo Separation	40dB or better
Amplitude Response 30Hz to	$\pm 0.5\text{dB}$ or better, 100KHz
Pre-emphasis	for FCC 75 microsec for CCIR 50 microsec
S/N Ratio	>70 dB below $\pm 75\text{ KHz}$ deviation at 400Hz measured in a 30Hz to 100KHz bandwidth with 75 μsec
Spurious Harmonic Suppression	meets or exceeds all FCC and CCIR requirements
Modulation Capability	meets or exceeds all FCC and CCIR requirements (the following AM noise parameters are determinated primarily by the DC power source used)
Asynchronous AM S/N Ratio	70dB below reference carrier with 100% amplitude modulation at 400Hz, without de-emphasis, no FM modulation present
Asynchronous AM S/N Ratio	60dB below reference carrier with 100% amplitude modulation at 400Hz, without de-emphasis, FM modulation = $\pm 75\text{ KHz}$ at 400Hz
THD, IMD, TIM	0.25% or better

TABLEB

DIMENSIONAL AND ENVIRONMENTAL SPECIFICATIONS

Chassis Dimensions 143mm (5.7") W

71mm (2.8") H

310mm (12.4") D

Ambient Operating Temperaure from -10°C to +45°C

Humidity 90% maximum, non-condensind

Weight 2 Kg (4.5 lbs)

CHAPTER2

ELECTRICAL DESCRIPTION

2.1 FRONT PANEL BOARD

The front panel board contains all of the controls, switches and indicators necessary to operate the unit.

Toggle switches control DC power (9 Fig.1), RF power (3 Fig.1), Stereo /Mono selection (1 Fig.1), Line/Mike selection (2 Fig.1), and Power/Deviation selection.

The four digi-switches (5 Fig.1) control the frequency of the unit in 100KHz steps.

2.2 SYNTHESIZER BOARD

The Synthesizer board contains the phase lock loop circuits required to maintain the unit on frequency. IC1 is the reference frequency oscillator and divider.

The crystal oscillator oscillates at 6.4MHz and is divided down to 781.25Hz which is the reference input frequency to IC2 phase detector. The VCO frequency of 88 to 108MHz comes in to the board at CN7 to IC4 where it is divided by 128.

The VCO signal then goes to T2 and IC5. IC5 divides by a number determined by the front panel digi-switches. The output of this divider is 781.25Hz when the unit is locked to the reference frequency.

When the unit is out of lock the phase detector generates an error signal which is filtered by IC3B and used to steer the VCO to the proper frequency.

IC3A generates the Mute signal which shuts down the RF output when the unit is unlocked, and lights the unlock light (12 Fig.1) on the front panel.

2.3 VCO/AUDIO BOARD

The VCO/Audio board generates an RF signal at the output frequency which is locked to a stable crystal reference as shown in 2.2.

The VCO is T4 and its associated circuits. The coil L1 is made up of coaxial cable to prevent microphonics in the output signal due to vibration of the oscillator components.

Diodes D2 and D4 are varicap diodes used to control the frequency of the VCO.

A DC control voltage from the synthesizer is used to control this point. Diodes D1 and D3 are used to modulate the VCO with the desired audio signal from the audio processing circuits.

T6 and T7 make up a set of gate controlled amplifiers. T9 controls the on/off condition the amplifier by application of the unlock control signal from the synthesizer.

The Audio section process the input audio signal for application to the

VCO.

IC8B amplifies the input signal. Jumper JP2 is used when the user desired single ended input.

With JP2 out of the circuit, the input is balanced. The output of IC8B is sent to IC8A. With capacitors C63 and C64 in the circuit, pre-emphasis is applied.

The insertion of these capacitors is controlled by the stereo/mono switch on the front panel. The output of IC8A is used to modulate the unit in the line selection.

In the microphone selection the signal from IC8B is further amplified in IC9B and IC9A. IC10A and IC10B are used to rectify the audio signal and process it for a deviation meter reading.

2.4 POWER AMPLIFIER BOARD

The power amplifier board receives the RF signal from the VCO board at a level of 1.5 to 2 watts.

In the URP this signal is amplified by Q1 to ten watt level with the high/low switch (4 Fig.1) on the front panel shorting out the collector/emitter junction of Q2. When the high/low switch is open, transistor Q2 lower the voltage to Q1 and thus lowers the output power.

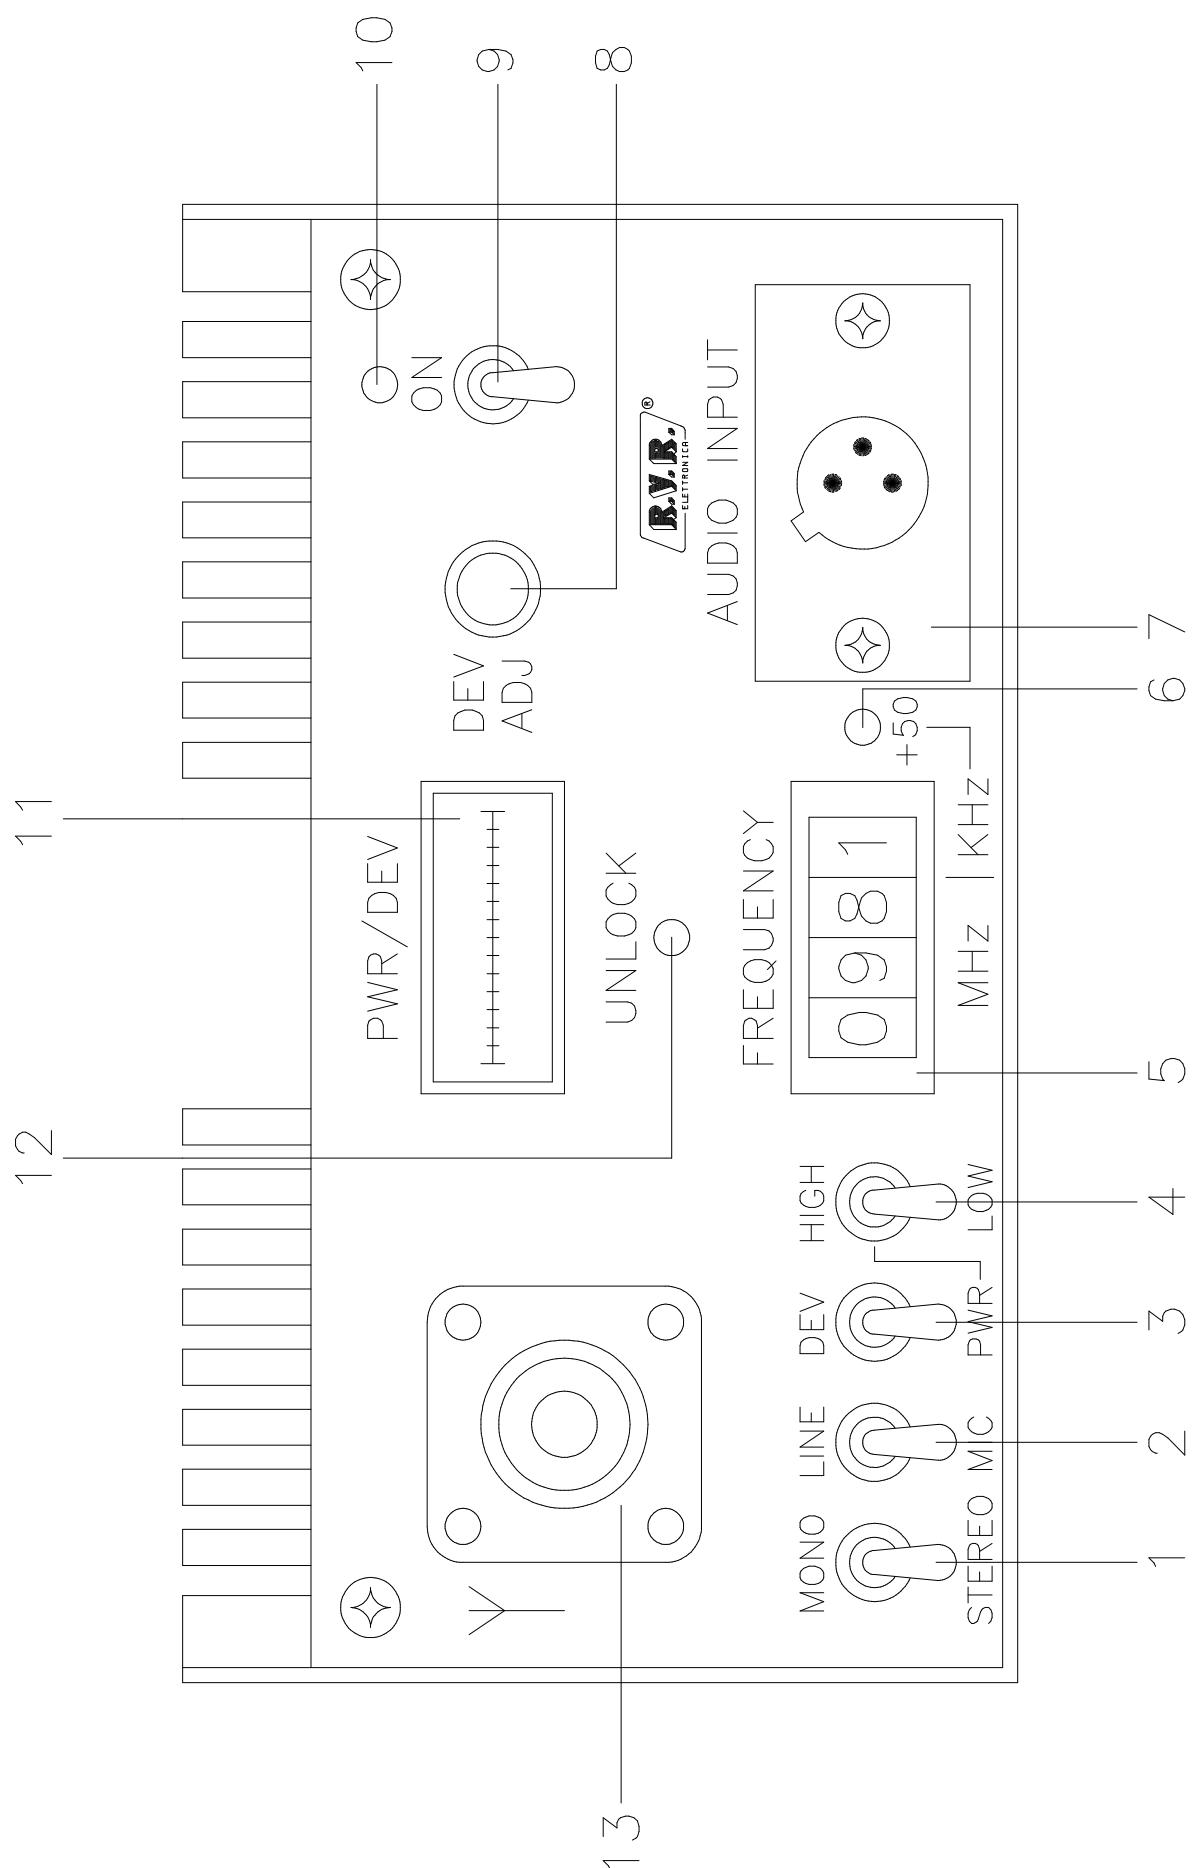

The amplified signal is then sent through a low pass filter to remove the harmonic content, then sent to the VSWR circuit where the power is sampled for the front panel meter reading.

Only the direct power is measured on the front panel.

FRONT PANEL

VIEW DESCRIPTION (Fig. 1)

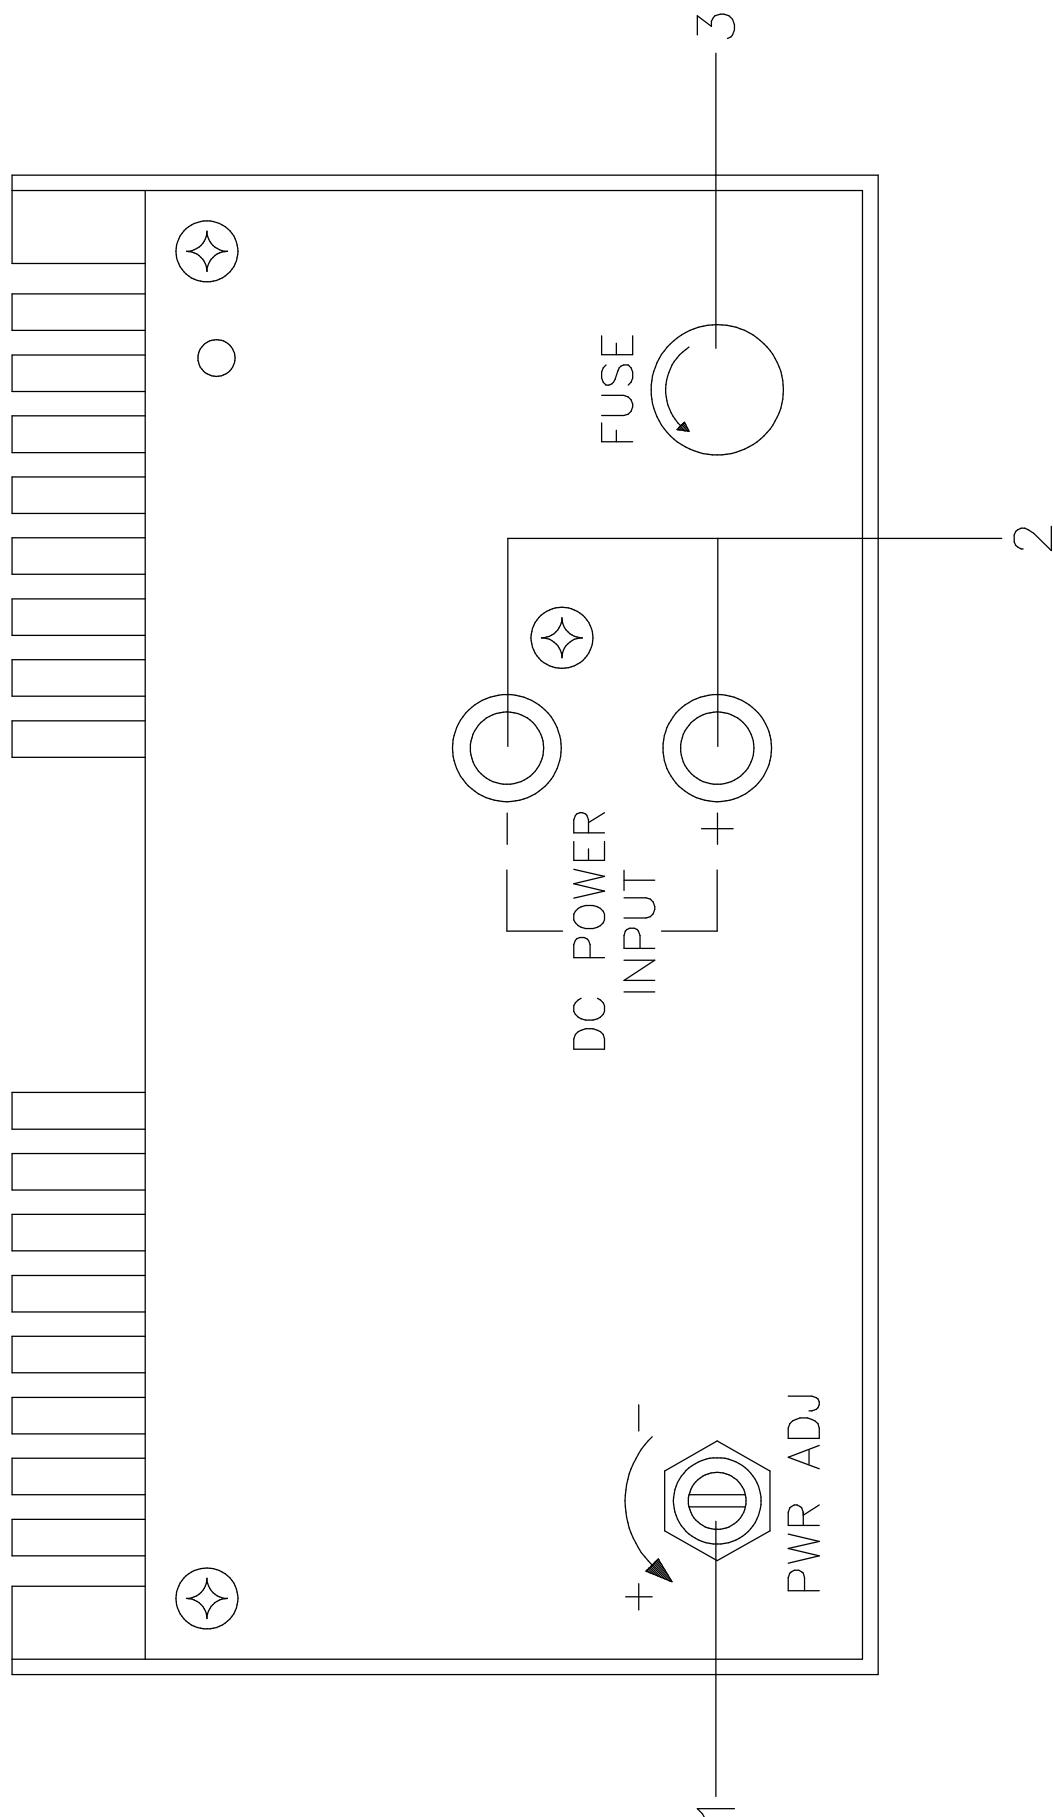

1	MONO/STEREO	Mono/Stereo switch
2	LINE/MIKE	Input type Swtitch : line or mike
3	DEV/PWR	The measurement made by the meter corresponds to the position of this selector (Deviation or Power Output)
4	HIGH/LOW	Level Power Output : High= 10W Low= 2W
5	FREQUENCY	Rotary frequency selector
6	+50	Led indicating the +50KHz shift insertion
7	AUDIO INPUT	Audio Input connector (XLRmale connector)
8	DEV ADJ	Deviation Adjustement trimmer
9	ON	Power On switch
10	ON	Power On led
11	PWR/DEV	Analog meter used to monitor the parameters of the exciter such as: DEVIATION POWER OUTPUT
12	UNLOCK	Indicated that the VCO is not locked to the reference frequency. The power will drop to zero in this condition

FRONT PANEL (FIG.1)

REAR PANEL VIEW DESCRIPTION (Fig. 2)

1	PWR ADJ	Trimmer to regulate the power output of the exciter
2	DC POWER INPUT	DC power input connector
3	FUSE	Fuse block. Fuse = 4A for the 10W version Fuse = 3.15A for the 2W version

REAR PANEL (FIG.2)

CHAPTER3

INSTALLATION PROCEDURE

3.1 INTRODUCTION

This chapter contains the information required to install the URP and carry out preliminary checks.

3.2 UNPACKING

Remove the unit from its packing and, before anything else, ensure that the unit has not suffered any damage during transit and that all front and rear panel controls are operational.

3.1 INSTALLATION

To install the URP exciter, carry out the following procedure:

- 1) Connect a suitable dummy load (50 ohm) to the antenna connector (13 Fig.1) or connect to the intended antenna (50 ohm).
The unit should be connected to the proper load to ensure that it does not generate unwanted spurs or get damage due to high VSWR caused by antenna or load mismatch.
Antenna VSWR should be 1.5:1 or better.
- 2) Set the desired operating frequency on the front panel digi-switches.
An additional 50KHz may be set with jumper JP1 on the synthesizer board.
- 3) Connect the audio line to the front panel.
The unit will accept either a line input of 0dBm or a microphone input of approx 20mV rms.
The desired input is selected with the Line/Mic switch (2 Fig.1) on the front panel.
This input will accept signals up to 100KHz. The user has the option of using either mono or a multiplex signal from stereo generator.
The URP unit does not contain an internal stereo generator.
- 4) Connect 12 to 13.8 volts DC to the rear panel.
CAUTION : Observe the polarity of DC voltage.
Plus goes to the red terminal and minus goes to the black terminal.
The URP units contain a reverse current diode to protect the unit against power reversal.
The purpose of this diode is to blow the fuse in the event of DC input reversal.
The fuse is 4A for the 10W version and 3.15A for the 2W version.
The size of the wire should be sufficient to prevent voltage drop

on the wires or heating of the wires.

The power supply itself should be tightly regulated. The unit may also be powered from a suitable 12 volt battery or a battery charged by a solar panel.

For the mains voltage connections see as reference Fig.3

In each case the power source must be stable to prevent unlocking of the VCO or modulation of the signal by unstable power source.

- 5) Place the DEV/PWR switch (3 Fig.1) on the front panel to the power position.

Turn the power on to the unit. Observe that the power light (10 Fig.1) comes on and the unlock light (12 Fig.1) will go out and the power meter (11 Fig.1) will register power output.

The unit is designed to shut down the power if the phase lock loop is in the unlocked condition.

- 6) Place the DEV/PWR switch (3 Fig.1) in the DEV position and apply the modulation.

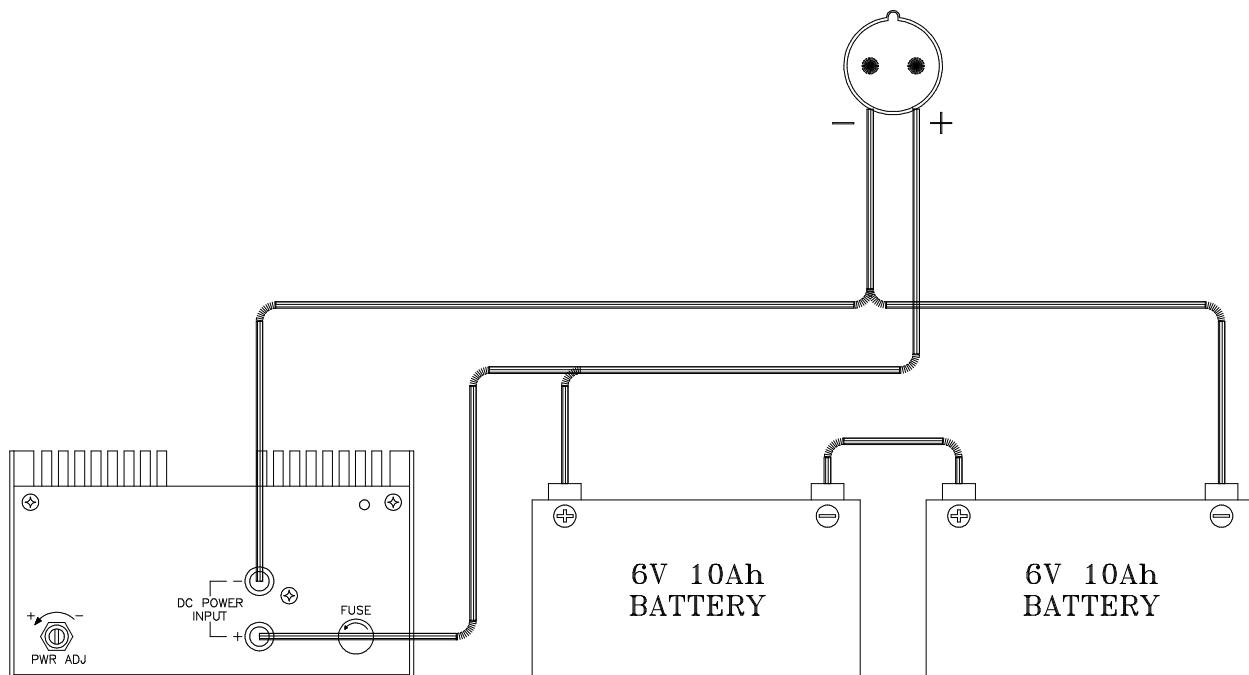

Check to ensure that the unit is not overmodulating.

Modulation level may be adjusted with the DEV ADJ control (8 Fig.1) on the front panel.

Use a small screwdriver blade to adjust the level.

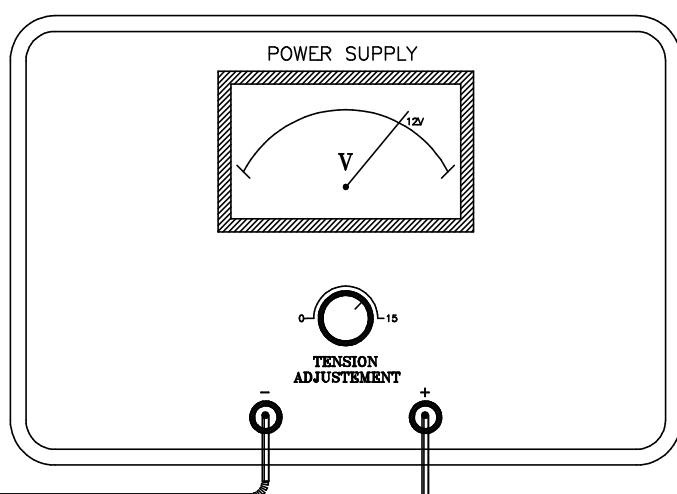

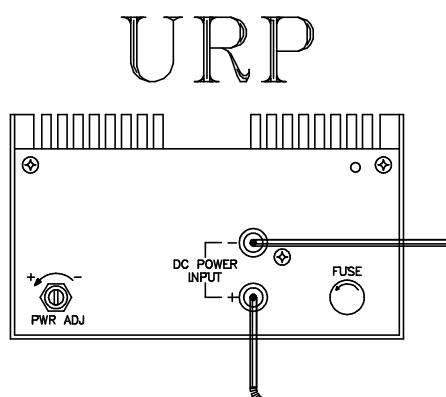

- 7) For the audio input connections see as reference Fig.4
